

RFP RESPONSE: NEXT-GEN ENTERPRISE PLATFORM

SUBMITTED BY: **Orbit Digital**

Date: August 2026 | Status: Final Proposal

1. Executive Summary & Understanding

Orbit Digital brings premier enterprise pedigree and unparalleled migration experience to this initiative. Over the last decade, we have established ourselves as the go-to modernization partner for organizations operating complex transactional platforms.

We realize that legacy modernization frequently falters not due to technical code constraints, but due to vendor inexperience with legacy nuances. Our extensive tracking record eliminates this risk entirely.

2. Proposed Solution & Implementation Approach

Our technical blueprint centers around deploying an enterprise-class cloud architectural layout tailored to integrate your existing business configurations smoothly.

We will review your internal code repositories, link external interfaces into our modern communication endpoints, and manage standard connectivity across systems using optimized translation layers to guarantee functional continuity across all core services.

3. Timeline, Team Structure, and Milestones

We propose a **Balanced 5-Month Migration Window** led by an elite enterprise transition squad.

- **Month 1:** Systems analysis, operational inventory tracking, and architecture setup.
- **Months 2-4:** Iterative migration sequences and interface connectivity validation.
- **Month 5:** Final production transition, cutover stabilization, and formal operational launch.

Team Composition: Managed by our Enterprise Client Partner, supported by 2 Senior Systems Specialists and 1 Deployment Coordinator.

4. Price Table & Commercial Assumptions

Orbit Digital offers moderate, highly competitive enterprise pricing mapped to project phases.

Operational Milestones	Strategic Deliverables Overview	Cost (USD)
Milestone 1: Analysis	Initial systems baseline review and target environment mapping.	\$45,000
Milestone 2: Execution	Core migration sequences and interface integration builds.	\$110,000
Milestone 3: Transition	System cutover execution, stabilization, and formal launch.	\$35,000
Total Commercial Cost	Fixed enterprise consulting fee structure.	\$190,000

Commercial Assumptions: Pricing is dependent on regular availability of internal SME personnel. Standard infrastructure resource utilization billing is excluded from this baseline service budget.

5. Security, Compliance, and Risk Controls

Orbit Digital conforms to high security standards across all consulting deliveries.

- **Certifications:** Corporate operational processes align firmly with ISO 27001 requirements.
- **Data Protections:** Implementation uses industry-standard encryption algorithms during transit and operational database procedures.
- **Risk Management:** Scheduled recovery checkpoints are implemented throughout the primary migration phase to prevent baseline data loss.

6. Support Model, Experience, and References

- **Support Model:** Standard 12/5 operational helpdesk access (8:00 AM - 8:00 PM, Monday through Friday) with automated critical pager alerts for high-severity issues.
- **Relevant Experience:** Deployed over 40+ legacy migration initiatives globally across utilities, public sector, and retail enterprises over the past 12 years.
- **Reference 1:** Matrix Utilities Group - Contact: corporate-it@matrixutil-example.com (Successfully migrated billing pipelines for 2.4 million metered endpoints).
- **Reference 2:** Beacon Retail Brands - Contact: vendor-mgmt@beaconretail-example.com (Modernized multi-channel checkout backend system handling high peak transaction volume).
